WHY POWER?

UTILITY NETWORK EXPERTS

POWER is an Esri Gold Partner and has been involved in the Utility Network since its inception. We were the first partner awarded the Esri Utility Network Management Specialty and the first to get an electric utility fully into production. We bring a knowledgeable, innovative and flexible approach and our talented technical experts work closely with your staff. We help you understand the Utility Network and plan for your transition to this transformational technology.

INTEGRATION EXPERTS

Implementing the ArcGIS Utility Network is only part of the equation. It's how well the platform integrates into your existing processes and systems that makes the real difference in a successful project. We are the first company to create an extractor for Milsoft's WindMil and DisSpatch applications allowing our clients to easily use these popular engineering tools with the Utility Network. POWER's substantial experience in the planning, architecture, design and development of integrated enterprise solutions will ensure that your Utility Network solution will effectively satisfy your business needs.

VENDOR NEUTRAL

We sell solutions, not products. Our independence allows us to recommend solutions that best address your needs rather than trying to force fit a predetermined software package. We are continuously developing innovative solutions for our clients to optimize their experience with the Utility Network.

RESPONSIVE SOLUTIONS

Our deep knowledge of utilities allows us to effectively deliver solutions that work for you. You can be confident that you are moving forward with the best sustainable solution that meets your unique operational needs.

POWER ENGINEERS

Are you ready for the Utility Network?

Now is the time to plan for the ArcGIS Utility Network. POWER can help you plan for and implement this groundbreaking GIS platform.

The ArcGIS Utility Network is a modern solution for modern utilities. It is a breakthrough in network modeling, information security and scalability. You can now manage complex networks of infrastructure in high fidelity across desktop, web and mobile platforms. Our experts can help you understand the Utility Network and plan for your organization's transition.

POWER has collaborated with many visionary utilities to prepare for their transition to the Utility Network, including:

- » Guam Power Authority
- » Madison Gas and Electric
- » Chelan Public Utility District
- » SEMCO
- » SCANA
- » City of Provo, UT

With POWER you gain industry-leading expertise that helps you plan for the Utility Network as part of a well-founded strategy, giving you the best value for your money. We are an energy industry engineering consultant with decades of successful project experience. Our team includes experts who come from inside the utility business and understand your needs.

Utility Network Management Specialty

POWER's Utility Network Roadmap

1

UTILITY NETWORK DATA READINESS ASSESSMENT
How ready is your organization's data? What steps can you be taking now to ensure your data is Utility Network ready when the time comes to make the transition? Does your data meet the higher standard for data completeness and accuracy required by the Utility Network? Our comprehensive data readiness assessment helps you answer those questions and plan your data transition budget and schedule.

2

UTILITY NETWORK FUNCTIONALITY GAP ANALYSIS
How ready is the Utility Network for your organization? You are heavily invested in your current applications and interfaces. The Utility Network and associated ecosystem of third-party products continues to evolve. When and how will that ecosystem support the business needs your current applications and interfaces support? Our comprehensive functionality gap analysis helps you answer those questions and define your transition budget and schedules.

3

ORGANIZATIONAL READINESS
How ready is your organization for the Utility Network? The Utility Network is transformational technology. POWER can help you engage your staff now to prepare for the coming change. From knowledge transfer and training to sandbox environments, POWER can help ensure your organization is ready to fully exploit the potential of this new technology.

4

FULL PRODUCTION MIGRATION
Final migration to the Utility Network of all your data, applications and interfaces may seem like a daunting task. When the time is right, POWER's unsurpassed expertise and experience developing enterprise GIS solutions, integrating enterprise system and migrating utility data to the Utility Network will ensure a successful transition for your organization.

Successful Utility Network projects require careful planning so why not start your planning now? Preparing and budgeting for this transition and cleaning up data in your current GIS can take a year or more as you align your data, your applications and your organization with this new technology. Our team can efficiently guide you through this critical transition.

Transformational change doesn't happen overnight.
Now is the time to start.
